

In pictures: Helicopter ride to Omarsa's organic shrimp farm

Omarsa is one of Ecuador's largest vertically integrated producers, processors and exporters of shrimp, posting revenues of \$250 million (€227.3 million) in 2014.

Its operations include three hatcheries, three shrimp farms and a processing plant, and it exports 100 percent of its product predominantly to the European Union, United States and Canada as well as South America and Asia.

Omarsa has a total of 3,000 hectares of farms divided into three sections. The company's organic farm, the largest in Ecuador, is 900 hectares with the other two farms are 1,200 and 900 hectares.

IntraFish was in Guayaquil earlier this month and was given the opportunity to take a helicopter ride to visit Omarsa's organic farm.

Omarsa's private helicopter gets ready.
